Alternative online lenders are non-bank lenders with business models that incorporate internet and emerging data technology to improve the borrower/applicant experience, loan decisioning, and loan funding.

The largest US small business alternative online lenders are CAN Capital and OnDeck.

Current market size of small business alternative lenders is unknown but estimated to be small vs total US small business loan market.

Growth is projected to be huge:
- PwC estimates $150 billion by 2025
- Financial Times estimates $25 billion by 2019
Online innovation has delivered unprecedented speed and ease of use for borrowers, and has made loan application, underwriting and decision for lenders inexpensive.

- Applications take little time to complete.
- Application and underwriting is automated with algorithms that seamlessly access applicant credit histories and extensive borrower data.
- Lenders offer fast turnaround times.
- Search Engine Optimization and Ad Tracking used extensively by lenders.
• Online Balance Sheet
• Lender/Borrower Online Marketplaces
• Peer to Peer Platforms
• Digital Payment Provider Backed Credit
ONLINE BALANCE SHEET LENDERS

- Loan decisions are made by proprietary underwriting systems that rely on cash flow data, credit scores, social media data, industry geography, and other firm specific data
- APRs average 25-80%, average terms of 6-18 months
- Products offered include traditional loans, cash advances, and lines of credit
LENDER/BORROWER ONLINE MARKETPLACE

- Online platforms that match borrowers to lenders that are part of their marketplace
- Wide variety of APRs, wide variety of terms
- Often refer to banks, traditional financial institutions, and online alternative lenders
MARKETPLACE (Peer-to-Peer) PLATFORMS

- Connect small business borrowers with capital from individual and institutional investors
- APRs average 10-30%, average terms of 36 – 60 months

1. As the industry has evolved, alternative online lenders have increasingly been referred to as marketplace lenders, a term that helps emphasize the growing institutional investor base of the sector. So while peer-to-peer lenders initially allowed individual borrowers to connect with individual lenders, individual lenders increasingly are being replaced by institutional investors who are turning to online marketplace lenders for investment opportunities. Because some balance sheet lenders are now originating small business loans for institutional investors to purchase, balance sheet lenders are also often referred to as marketplace lenders. In the Treasury Department’s recent Request for Information, they defined online marketplace lending as “the segment of the financial services industry that uses investment capital and data-driven online platforms to lend either directly or indirectly to small businesses and consumers.”
DIGITAL PAYMENT PROVIDER BACKED CREDIT PRODUCTS

- Paypal Working Capital, Square Capital, Amazon Pay
- Only available to select businesses already processing payments using the payment system
- Fixed, pre-determined percentage of business’ daily sales deducted – borrower determines the percentage of sales towards repayment
- A single loan fee based on amount of loan is charged
Small-business owners may turn to online alternative lenders for a variety of reasons.

- Simplified application process
- Rapid approvals and disbursement of funds
- Reduced bank lending to small business borrowers
- Impaired credit may make getting a bank loan challenging
- Perception that banks are less likely to lend to small firms now

Very limited data are available on and relatively little is known about firms that tend to use online lenders.
### Characteristics of SBCS Credit Applicants
